PERSONAL PROFILE

DevOps Lead with 2+ years of experience as the end-to-end owner of infrastructure, deployment, and release operations for a multi-tenant SaaS observability platform. Proven track record managing client-facing Kubernetes deployments across AWS, GCP, Azure, and Oracle Cloud, sustaining 99.9% uptime while acting as the primary technical point of contact for client infrastructure needs. Skilled at translating client requirements into resilient, automated, multi-cloud architecture, and at leading cross-functional collaboration between engineering, SRE, and stakeholders.

EDUCATION

Xavier Institute of Engineering, Mumbai, India **December 2020 - May 2024**
Bachelors of Engineering(B.E) in Information Technology ***CGPA - 8.50/10***

TECHNICAL SKILLS

Languages: Bash, Python, Shell Scripting, YAML
DevOps & Automation: Jenkins, GitHub Actions, GitLab CI/CD, ArgoCD, Helm, Ansible, Terraform, Packer
Containerization & Orchestration: Docker, Kubernetes, EKS, GKE, AKS, Helm, Kustomize, ArgoCD
Cloud Platforms: AWS, Azure, GCP, Oracle Cloud, IBM Cloud
Monitoring & Observability: Prometheus, Grafana, ELK Stack, OpenTelemetry, Datadog, New Relic, Splunk, CloudWatch, Azure Monitor
IAM & Security: AWS IAM, Keycloak, Microsoft Entra ID (Azure AD), OAuth2, SAML, HashiCorp Vault, OpenAM
Messaging & Streaming: Kafka, RabbitMQ, Amazon SQS
Databases: MySQL, PostgreSQL, MongoDB, SQL Server, Azure SQL
Version Control & Collaboration: Git, GitHub, Azure Repos, JIRA, Confluence, ServiceNow
Web Servers & OS: Linux, Nginx, Apache, IIS, Gunicorn

WORK EXPERIENCE

DevOps Lead **April 2025 – Present**
***Kubesense.ai**, Chennai, India*

- **Sole end-to-end owner of deployment and infrastructure** for a multi-tenant SaaS observability and telemetry platform — accountable for architecture decisions, provisioning, releases, uptime, and incident response across every client environment.
- **Directly managed client-facing deployments**, acting as the primary technical point of contact for onboarding new clients onto isolated **Kubernetes stacks** and resolving production infrastructure issues in client environments.
- **Architected and operated multi-cloud Kubernetes deployments** across **AWS (EKS), GCP (GKE), Azure (AKS), and Oracle Cloud**, ensuring **99.9% uptime** and cost-efficient scaling through optimized cluster design.
- **Automated Kubernetes deployments** using **Helm, Kustomize, and ArgoCD**, enabling GitOps-based continuous delivery and **self-healing, auto-scaled microservices** across all client clusters.
- **Built and optimized the observability stack** integrating **eBPF**, **OpenTelemetry**, **Prometheus**, and **Datadog Agent** for unified metrics, logs, and traces — the core product our clients rely on.
- **Worked extensively with open-source observability tools and exporters** — including **node-exporter**, **blackbox-exporter**, **cAdvisor**, **Alertmanager**, and **Grafana Loki** — to enable fine-grained visibility and proactive alerting across microservices.
- **Implemented CI/CD pipelines** via **GitHub Actions**, adding automated testing, linting, and image scanning for secure, zero-downtime releases.
- **Owned Infrastructure as Code (IaC)** using **Terraform** and **Ansible** across all three hyperscalers, achieving version-controlled, reproducible infrastructure and consistent client environment provisioning.
- **Integrated FinOps practices** and auto-scaling strategies to optimize performance, fault tolerance, and cost efficiency across environments.
- **Owned platform security posture** through IAM policy hardening, VPC/VNet network segmentation, TLS encryption, and compliance automation across every cloud.
- Collaborated directly with clients, developers, and SREs to define **service-level objectives (SLOs)**, alerting thresholds, and incident workflows for end-to-end observability.

Cloud and DevOps Engineer **Nov 2023 – March 2025**
***Quantasis Solutions Pvt. Ltd.**, Mumbai, India*

- **Owned design and management** of secure, scalable multi-cloud infrastructure across **AWS**, **Azure**, and **Oracle Cloud** as the team's DevOps lead.
- **Implemented CI/CD pipelines** using **Azure DevOps**, **GitHub Actions**, and **GitLab**, automating build, testing, and deployment workflows.
- **Automated Kubernetes deployments** with **Helm**, improving microservice availability and reducing manual configuration.
- **Integrated SonarQube** into CI pipelines for continuous code quality analysis and security scanning.
- **Developed Infrastructure as Code (IaC)** with **Terraform** and **ARM templates**, ensuring reproducible and versioned provisioning.
- **Implemented centralized logging and monitoring** via **ELK Stack** and **Prometheus**, improving incident response and MTTR.
- **Enhanced identity management** using **OpenAM**, integrating **OAuth2**, **SAML**, and **LDAP** for compliance.
- **Automated deployments and server management** using **Bash**, **PowerShell**, and one-click scripts to reduce configuration drift.
- **Mentored team members** on Kubernetes, CI/CD, and automation best practices, improving overall DevOps maturity.

CERTIFICATIONS

- **Microsoft:** Azure DevOps Engineer Expert, Azure Fundamentals, AI/Data/Security Fundamentals
- **Oracle Cloud Infrastructure:** Architect Associate, Foundations Associate, AI Foundations, Generative AI Professional
- **AWS:** Certified Cloud Practitioner, Academy Cloud Foundations, Cloud Quest
- **GitHub & FinOps:** Foundations, Actions, Advanced Security, Administration, Copilot; FinOps Certified Practitioner
